

155Mbps 1550nm Single Mode 120km 1x9 Optical Transceiver with Duplex ST Connector

CS15D-03A-3U-Px-Tx

DESCRIPTION

The CS15D-03A-3U-Px-Tx duplex 1x9 optical transceivers are high performance, cost effective optical transceiver modules for serial optical data communications application specified for a data rate of 155 Mb/s. The 1x9 transceiver module provides 120km transmission distance over single mode fiber at nominal wavelength of 1550nm. The optical transceiver is RoHS compliant.

FEATURES

- RoHS compliant
- Compliant with 155 Mbps ATM and SONET OC-3 SDH STM-1
- Industry standard 1x9 footprint
- ST duplex connector
- Single power supply 3.3V
- Differential LVPECL inputs and outputs
- Compatible with solder and aqueous wash processes
- Class 1 laser product compliant with EN 60825-1
- Input/Output: DC/DC
- Up to 120km over single mode fiber

APPLICATIONS

- Extended L1.2 / Fast Ethernet

PRODUCT OVERVIEW

PART NUMBER	OPERATING TEMPERATURE	CONNECTOR
CS15D-03A-3U-PC-T	0°C to 70°C	Plastic
CS15D-03A-3U-PC-TM	0°C to 70°C	Metal
CS15D-03A-3U-PI-T	-40°C to 85°C	Plastic
CS15D-03A-3U-PI-TM	-40°C to 85°C	Metal

ABSOLUTE MAXIMUM RATINGS

PARAMETER	SYMBOL	MIN	MAX	UNIT	NOTES
Storage Temperature	T_S	-40	85	°C	
Supply Voltage	V_{CC}	-0.5	4.0	V	
Input Voltage	V_{IN}	-0.5	V_{CC}	V	
Soldering Temperature	T_{SOLD}	-	260	°C	10 seconds on leads

OPERATING ENVIRONMENT

PARAMETER	SYMBOL	MIN	MAX	UNIT	NOTES
Case Operating Temperature	T_C	0	70	°C	CS15D-03A-3U-PC-Tx
		-40	85		CS15D-03A-3U-PI-Tx
Supply Voltage	V_{CC}	3.1	3.5	V	

TRANSMITTER ELECTRO-OPTICAL CHARACTERISTICS ($V_{CC} = 3.1V$ to $3.5V$, $T_C = 0^\circ C$ to $70^\circ C$, $-40^\circ C$ to $85^\circ C$)

PARAMETER	SYMBOL	MIN	TYP.	MAX	UNIT	NOTES
Data Rate	B	50	155	200	Mbps	
Output Optical Power 9/125um fiber	P_{out}	0	-	+5	dBm	Average
Extinction Ratio	ER	10	-	-	dB	
Center Wavelength	λ_C	1530	1550	1570	nm	
Spectral Width (-20dB)	$\Delta\lambda$	-	-	1	nm	
Side Mode Suppression Ratio	SMSR	30	-	-	dB	
Rise/Fall Time (10~90%)	$T_{r,f}$	-	1	2	ns	
Output Eye	Compliant with Telcordia GR-253-CORE Issue 3 and ITU-T recommendation G-957					
Power Supply Current	I_{CC}	-	-	180	mA	Note 1
Transmitter Data Input Voltage-High	$V_{IH}-V_{CC}$	-1.1	-	-0.74	V	
Transmitter Data Input Voltage-Low	$V_{IL}-V_{CC}$	-2.0	-	-1.58	V	
Transmitter Data Input Differential Voltage	V_{DIFF}	0.3	-	1.6	V	

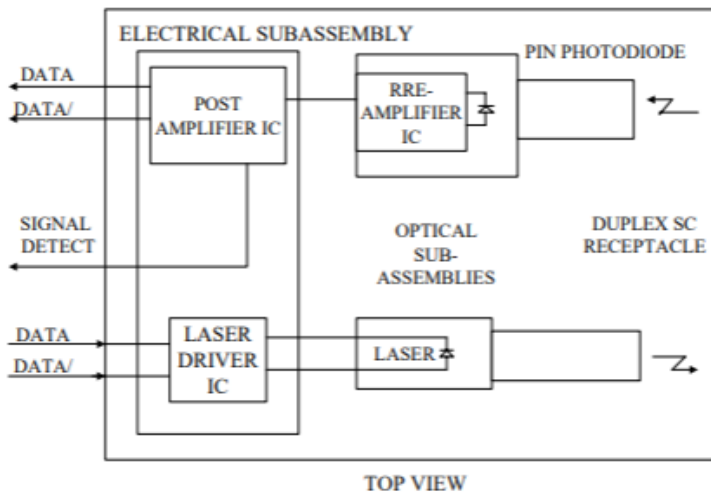

Note 1: Not including the terminations.

RECEIVER ELECTRO-OPTICAL CHARACTERISTICS ($V_{CC} = 3.1V$ to $3.5V$, $T_C = 0^\circ C$ to $70^\circ C$, $-40^\circ C$ to $85^\circ C$)

PARAMETER	SYMBOL	MIN	TYP.	MAX	UNIT	NOTES
Data Rate	B	50	155	200	Mbps	
Optical Input Power-Maximum	P_{IN}	0	-	-	dBm	Note 1
Receiver Input Power-Minimum (Sensitivity)	P_{IN}	-	-	-35	dBm	Note 1
Operating Center Wavelength	λ_C	1260	-	1610	nm	
Signal Detect-Asserted	P_A	-	-	-35	dBm	Average
Signal Detect-Deasserted	P_D	-45	-	-	dBm	Average
Signal Detect-Hysteresis	P_A-P_D	1.0	-	-	dB	
Signal Detect Output Voltage-High	$V_{OH}-V_{CC}$	-1.1	-	-0.74	V	
Signal Detect Output Voltage-Low	$V_{OL}-V_{CC}$	-2.0	-	-1.58	V	
Power Supply Current	I_{CC}	-	-	100	mA	Note 2
Data Output Rise, Fall time (10~90%)	$T_{r,f}$	-	1	2	ns	
Data Output Voltage-High	$V_{OH}-V_{CC}$	-1.1	-	-0.74	V	
Data Output Voltage-Low	$V_{OL}-V_{CC}$	-2.0	-	-1.58	V	

Note 1: The input data is at 155.52 Mbps, $2^{23}-1$ PRBS data pattern. The receiver is guaranteed to provide output data with Bit Error Rate (BER) better than or equal to 1×10^{-10} .

Note 2: The current excludes the output load current.

BLOCK DIAGRAM OF TRANSCEIVER

Transmitter Section - The transmitter section consists of a 1550 nm InGaAsP in an eye safe optical subassembly (OSA) which mates to the fiber cable. The laser OSA is driven by a LD driver IC which converts differential input LVPECL logic signals into an analog laser driving current.

Receiver Section - The receiver utilizes an InGaAs PIN photodiode mounted together with a trans-impedance preamplifier IC in an OSA. This OSA is connected to a circuit providing post-amplification quantization, and optical signal detection.

Receiver Signal Detect - Signal Detect is a basic fiber failure indicator. This is a single-ended LVPECL output. As the input optical power is decreased, Signal Detect will switch from high to low (deassert point) somewhere between sensitivity and the no light input level. As the input optical power is increased from very low levels, Signal Detect will switch back from low to high (assert point).

CONNECTION DIAGRAM

PIN	SYMBOL	DESCRIPTION
1	<i>RX GND</i>	Receiver Signal Ground. Directly connect this pin to the receiver ground plane.
2	<i>RD+</i>	<i>RD+</i> is an open-emitter output circuit. Terminate this high-speed differential LVPECL output with standard LVPECL techniques at the follow-on device input pin. (See recommended circuit schematic)
3	<i>RD-</i>	<i>RD-</i> is an open-emitter output circuit. Terminate this high-speed differential LVPECL output with standard LVPECL techniques at the follow-on device input pin. (See recommended circuit schematic)
4	<i>SD</i>	Signal Detect. Normal optical input levels to the receiver result in a logic “1” output, V_{OH} , asserted. Low input optical levels to the receiver result in a fault condition indicated by a logic “0” output V_{OL} , deasserted. Signal Detect is a single-ended LVPECL output. <i>SD</i> can be terminated with LVPECL techniques via $50\ \Omega$ to $V_{CCR} - 2\text{ V}$. Alternatively, <i>SD</i> can be loaded with a $180\ \Omega$ resistor to <i>RX GND</i> to conserve electrical power with small compromise to signal quality. If Signal Detect output is not used, leave it open-circuited. This Signal Detect output can be used to drive a LVPECL input on an upstream circuit, such as, Signal Detect input or Loss of Signal-bar.
5	V_{CCR}	Receiver Power Supply. Provide +3.3 Vdc via the recommended receiver power supply filter circuit. Locate the power supply filter circuit as close as possible to the V_{CCR} pin.
6	V_{CCT}	Transmitter Power Supply. Provide +3.3 Vdc via the recommended transmitter power supply filter circuit. Locate the power supply filter circuit as close as possible to the V_{CCT} pin.
7	<i>TD-</i>	Transmitter Data In-Bar. Terminate this high-speed differential LVPECL input with standard LVPECL techniques at the transmitter input pin. (See recommended circuit schematic)
8	<i>TD+</i>	Transmitter Data In. Terminate this high-speed differential LVPECL input with standard LVPECL techniques at the transmitter input pin. (See recommended circuit schematic)
9	<i>TX GND</i>	Transmitter Signal Ground. Directly connect this pin to the transmitter signal ground plane. Directly connect this pin to the transmitter ground plane.

RECOMMENDED CIRCUIT SCHEMATIC

In order to get proper functionality, a recommended circuit is provided in above recommended circuit schematic. When designing the circuit interface, there are a few fundamental guidelines to follow.

- (1) The differential data lines should be treated as 50 Ω Micro strip or strip line transmission lines. This will help to minimize the parasitic inductance and capacitance effects. Locate termination at the received signal end of the transmission line. The length of these lines should be kept short and of equal length.
- (2) For the high-speed signal lines, differential signals should be used, not single-ended signals, and these differential signals need to be loaded symmetrically to prevent unbalanced currents which will cause distortion in the signal.
- (3) Multi-layer plane PCB is best for distribution of VCC, returning ground currents, forming transmission lines and shielding. Also, it is important to suppress noise from influencing the fiber-optic transceiver performance, especially the receiver circuit.
- (4) A separate proper power supply filter circuits shown in Figure for the transmitter and receiver sections. These filter circuits suppress VCC noise over a broad frequency range, this prevents receiver sensitivity degradation due to VCC noise.
- (5) Surface-mount components are recommended. Use ceramic bypass capacitors for the 0.1 μF capacitors and a surface-mount coil inductor for 1 μH inductor. Ferrite beads can be used to replace the coil inductors when using quieter VCC supplies, but a coil inductor is recommended over a ferrite bead. All power supply components need to be placed physically next to the VCC pins of the receiver and transmitter.
- (6) Use a good, uniform ground plane with a minimum number of holes to provide a low-inductance ground current return for the power supply currents.

RECOMMENDED BOARD LAYOUT HOLE PATTERN

Unit : mm(inches)

This transceiver is compatible with industry standard wave or hand solder processes. After wash process, all moisture must be completely removed from the module. The transceiver is supplied with a process plug to prevent contamination during wave solder and aqueous rinse as well as during handling, shipping or storage.

Solder fluxes should be water-soluble, organic solder fluxes. Recommended cleaning and degreasing chemicals for these transceivers are alcohol's (methyl, isopropyl, isobutyl), aliphatics (hexane, heptane) and other chemicals, such as soap solution or naphtha. Do not use partially halogenated hydrocarbons for cleaning/degreasing.

DRAWING DIMENSIONS

ALL DIMENSIONS ARE ±0.20mm UNLESS OTHERWISE SPECIFIED

Unit : mm

ADDITIONAL NOTES

- Avoid eye or skin exposure to laser radiations.
- The device is sensitive to electro-static discharge (ESD). The device should be handled with ESD proof tools. To assemble the device on PCB, proper grounding is required to prevent ESD.
- Specifications are subject to change without notice.
